

**PROPÓSITO:**

<https://leprekon-game.site> **MOTIVACIÓN:**

My trials at home show that if you train the classifier on half the data set (around 5300 bogus comments and 1900 legit comments) and then run it against the other half, I get about 6% false negatives and 1% false positives. **EXPLICACIÓN:**

My trials at home show that if you train the classifier on half the data set (around 5300 bogus comments and 1900 legit comments) and then run it against the other half, I get about 6% false negatives and 1% false positives. **EJERCICIOS:**

My trials at home show that if you train the classifier on half the data set (around 5300 bogus comments and 1900 legit comments) and then run it against the other half, I get about 6% false negatives and 1% false positives. **EVALUACIÓN:**

My trials at home show that if you train the classifier on half the data set (around 5300 bogus comments and 1900 legit comments) and then run it against the other half, I get about 6% false negatives and 1% false positives. **BIBLIOGRAFÍA:**
