IMPORTANCE OF CONSERVING THE ENVIRONMENT

The most obvious reason for conservation is to protect wildlife and promote biodiversity. Protecting wildlife and preserving it for future generations also means that the animals we love don’t become a distant memory. And we can maintain a healthy and functional ecosystem.

Some species cannot survive outside of their own natural habitat without human intervention such as in zoos and aquariums. So the destruction of their natural habitats poses a real threat to their survival. Furthermore, species that migrate and inhabit more than one natural habitat are also vulnerable. So the preservation of these habitats helps to prevent the entire ecosystem being harmed.

As more and more species face extinction, the work being done to protect the wildlife that calls this planet home is becoming more and more important.

Biodiversity in Colombia

The national symbols of Colombia illustrate the country’s unique biodiversity.

The national tree of Colombia is the wax palm tree that grows in the Cocora valley in Quindío.It is the tallest in the world. Another symbol is a beautiful orchid called Cattleya trianae or May flower. The national bird is the Andean condor which is the largest flying bird in the world. There are many other interesting facts about Colombia’s natural resources, for example, Colombia has a wide variety of amphibians such as the golden poison frog, the world’s most poisonous animal, which lives in the pacific rainforest of Colombia. Colombia has also confirmed the presence of the blue-bearded helmet crest, a very rare hummingbirds . Scientists thought these little birds were extinct, but they are living in the Sierra Nevada de Santa Marta!.
