

PROPÓSITO:

READ THE TEXT AND WRITE THE SPECIFIC VOCABULARY .

Environmental pollution

Pollution of the environment is a matter of vital importance for humanity, we must all contribute a grain of sand to stop it.

The activities carried out daily by human beings originate waste that is deposited in the environment (soil, air, water), causing, in many cases, damage to health, the planet and the quality of life of future generations.

Environmental pollution should favor the awareness of this problem and, as far as possible, develop activities in the community that contribute to the control of environmental pollution.

What are the main contaminants?

- 1.- Carbon Dioxide: coming from industries and heating.
- 2.- Carbon monoxide: coming from combustion engines such as vehicles, motorcycles, machines, etc.
- 3.- Sulfur dioxide: comes from the smoke emitted by the combustion of airplanes.

MOTIVACIÓN:

Read the statements about GARBAGE AND WRITE A CONCLUSION

Along the federal roads that surround and

cross the borders of the reserves it is easy to observe the accumulation of trash.

The corresponding municipalities

should deal with the garbage and solid waste from their territories.

Local inhabitants, industry workers, as well as the industries themselves, generate large amounts of pollution.

Contamination with litter is believed to be a general problem in all European Seas.

EXPLICACIÓN:

Read the text IDENTIFY THE SPECIFIC VOCABULARY AND WRITE ON YOUR ENGLISH NOTEBOOK.

RECYCLED. ... To recycle, it is necessary to make a selection of the garbage from the different materials that we throw away (especially organic matter rest). There are materials that do not know their possibilities recycling or places we are not informed of the same collection.

RECYCLED.

The three R's of ecology are: Reduced, Reused and Recycle. Reduced consumption, choosing to buy products with less environmental impact and avoid producing unnecessary garbage.

Reuse, repeatedly using different forms of different consumable products. Recycling, using waste as a

raw material for the manufacture of a product that can be equal to or different from the original. The recycling of the material is very important because it allows the saving of raw materials and reduces energy and water consumption, while reducing waste production and pollution that this entails. To recycle, it is necessary to make a selection of the garbage from the different materials that we throw away (especially organic matter rest). There are materials that do not know their possibilities recycling or places we are not informed of the same collection. Therefore, we intend to provide information on the possibility of recycling the material most commonly found in our home.

EJERCICIOS:

PLEASE draw the steps of recycled

EVALUACIÓN:

Write 3 ideas about to protect the environment
